Conflict Minerals Compliance Declaration

EFC/WESCO is compliant with HR 4173 (the Dodd-Frank law), specifically regarding section 1502 – Conflict Minerals. Beginning May 31, 2014 many of our customers began reporting the use of minerals sourced in the Democratic Republic of the Congo (DRC) or an adjoining country. The minerals affected are gold, tin, tantalum, and tungsten. Our products may contain tin depending on the configuration. They do not contain the other conflict minerals. We have completed the process of determining if any of the listed minerals were sourced in DRC or surrounding countries, and if so, the measures taken to exercise due diligence on the source and chain of custody of those minerals. We have done this in order to respond to requests for this information from our customers who are obligated to report under this legislation. This effort is referred to as a Reasonable Country of Origin Inquiry (RCOI). We have completed the process of collecting the appropriate information from our supply chain and will be now in the position to respond to requests by providing EICC-GESI (CRMT 4.20) declarations for the products we produce. We verify our conflict mineral status annually and will continue to do so in the future.

While we have no reason to believe that any of the tin that we use originated in the DRC or any of the surrounding countries (covered countries) listed in the Dodd-Frank legislation. It should be noted that a significant portion of the tin we use comes from reprocessed materials (scrap) and therefore would be “conflict mineral free”. It is our policy to only source material from “conflict mineral free” suppliers and not to do anything that would directly or indirectly fund the atrocities occur in the DRC. We review the EICC smelters list quarterly to make sure that ours are certified. You may address your requests for information to our offices in Waterbury; please contact Leonard at leonard.gelonese@filmcapacitors.com.
